# Marsh Creek Pump Station Project

## Project

## Benefits

The primary benefit of this work will be the installation of a new pump station which will have the ability to handle future flows from Sandy Springs. The pump station will have two new 4.5 MGD pumps.

Also, to cleanup the surrounding area by removal of unused buildings and equipment left over from the old waste water treatment plant and old pump station.

## Schedules

Construction period is from :

June 29, 2009 to  
June 29, 2010.

## Fact Sheet - S231

### What is the Marsh Creek Pump Station Project?

In the 1960's, the Marsh Creek Facility, Located at 6500 Old Riverside Dr., Sandy Springs, Georgia, was built as a waste water treatment facility. The plant was later converted to a pump station. The Marsh Creek Pump Station Project consists of replacing the existing outdated pump station with a new state of the art pump station with upgraded equipment, flow monitoring devices and a new housing structure. The project also includes the demolition and removal of all unused structures and equipment from the site. The new pump station will occupy approximately 2 acres of the 23 acre campus.

### How will the surrounding community be impacted?

The project is anticipated to have minimal impact on the surrounding community and the adjacent creeks. Construction activities will be limited to the project site. During the demolition phase trucks will be entering the site regularly to remove debris and bring in equipment.

The contractor's work hours will be limited to 8 AM to 6 PM during week days. Although no work is anticipated on the weekends, it may become necessary for the contractor to occasionally work on Saturdays.

**Current Status:** Demolition of the old waste water treatment facility is complete. The existing pump station will remain in operation until completion of the new pump station. Construction of the new underground pump station began in January 2010. The Concrete work for the new underground pump station is complete. Installation of the new equipment will begin this month. The project is approximately 58% complete and scheduled to be finalized by July 2010.
